High-visibility warning clothing

The EN ISO 20471:2013 standard lays down requirements for clothing that aims to visually emphasize the presence of the user in order to make the user more noticeable in dangerous situations, both day and night.

X = fluorescence class, reflecting surface, from 1 to 3 (see label for correct class)

	Class 1	Class 2	Class 3
Fluorescent material	0,14 m²	0,50 m²	0,80 m²
Reflective material (required length for 50 mm-wide strips)	0,10 m² (2 m)	0,13 m² (2,6 m)	0,20 m² (4m)

The number next to the icon indicates the class in which the article falls. This depends on the minimum surface area of the fluorescent and reflective material.

STORAGE REQUIREMENTS

The clothing should be stored in a clean, cool and dry place and not kept compressed in the original packaging. Do not expose the clothing to direct sunlight. Never store the clothing wet; always allow it to dry hanging first. Make sure that the packaging and the clothing are not damaged when shipped.

TESTING INSTITUTE

This clothing has been certified by: Centexbel (Notified Body no. 0493), Technologiepark 70, BE 9052 Gent, Belgium.
