# Intercom Devices Market Scope and Market Size

Intercoms are electronic communications systems that consist of fixed microphone/speaker units that connect to a central control device. There are two basic types of products: hard-wired and wireless. Hard-wired intercoms are connected by cables and are installed in buildings, apartments, offices, and manufacturing facilities. Wireless intercoms rely upon radio frequency (RF) transmission and are used in television stations, broadcast control vehicles, power plants, and communications facilities.

An intercom system is an advanced type of door entry system with a camera for managing access to a building. Like other types of intercom systems, a video door intercom with a camera also supports communication between visitors and occupants. Rather than relying on just voice, occupants can view live or recorded images from a door entry reader equipped with a camera to verify a visitor's identity before granting access.

# About Data Bridge Market Research

**An absolute way to forecast what future holds is to comprehend the trend today!**

DBMR publishes high quality and comprehensive market research studies to help clients acquire granular level clarity on current business trends and expected future developments. We are committed to our client's needs, offering custom solutions that best fit for strategy development and implementation to extract tangible results.

With a team of exceptional people including industry analysts, consultants and domain experts, leveraging their global experience, we efficiently deliver excellence in all the assignments we undertake.
