

113Minute

A rescue team led by Jonas Taylor is saving a group of sailors trapped inside a sunken nuclear submarine when Jonas sees the hull of the submarine being damaged by an unknown creature.

Two rescuers are stuck in the damaged submarine and say their return to the rescue submersible will take a few minutes. Taylor leaves them behind as he is afraid they will all die if they wait. As they leave, the damaged sub explodes. Taylor's claim is that a giant sea creature caused the disaster. He is dismissed by his teammate Dr. Heller, who believes Taylor was affected with pressure-induced psychosis and blames him for the loss of their friends. Five years later, billionaire Jack Morris meets Dr. Minway Zhang at the underwater research facility "Mana One", which Morris finances. Zhang and his daughter, Suyin, an oceanographer, are supervising a mission to explore what may be a deeper section of the Marianas trench, concealed by a Thermocline cloud of hydrogen sulfide. The mission is being conducted by Lori (Taylor's ex-wife), Toshi, and The Wall in a submersible. The mission appears to be going well until a very large creature hits the submersible, causing it to lose contact with Mana One
